EDUCATION

Northeastern University - Khoury College of Computer Science

Boston, MA

B.S. in Computer Science, Business

Sep. 2023 – May 2027

GPA: 3.73/4.00; **Honors:** Dean's List

Relevant Courses: Object-Oriented Design, Data Structures + Algorithms, Programming Languages, Discrete Structures, Intro to Databases

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Rust, Java, SQL, Swift

Backend: Node.js, Express, NestJS, Spring, Django, Flask, GraphQL, PostgreSQL, MongoDB, Prisma, TypeORM

Frontend: React, Next.js, HTML/CSS, Tailwind CSS, ChakraUI, shadcn/ui, SwiftUI

Cloud & Infrastructure: AWS (S3, Amplify, ECS), Docker, Git, GitHub Actions, Vercel, Jenkins

EXPERIENCE

Software Engineer Intern

Boston, MA

Sonos

Jun. 2026 – Aug. 2026

- Shipped SwiftUI opt-in page atop Optimizely, letting any user enable experimental features previously limited.
- Built 4 experimental feature prototypes in Swift/SwiftUI in a 10-week cycle, 2 scoped for general availability.
- Architected embedded HTTP server in Swift with structured concurrency; authored threat model for security review.
- Developed SwiftUI interfaces surfacing system health and update telemetry for troubleshooting device issues.

Lead Software Engineer

Boston, MA

Sandbox Software Consultancy

Sep. 2025 – May 2026

- Lead React/Next.js engineering for GraduateNU, serving 900+ undergraduates with real-time degree validation.
- Automated data integrity checks across academic years by building CLI diff tool for 1,200 requirement files.
- Expanded GitHub Actions CI/CD to verify integrity of major requirements and deploy to staging on PR merge.
- Conducted code reviews and 1:1s with developers on technical approach, onboarding 2 new engineers to codebase.

Software Engineer Co-op

Boston, MA

Digital Archive of Indigenous Language Persistence (DAILP)

Jul. 2025 – Feb. 2026

- Migrated from WordPress CMS to custom Rust backend content management, eliminating monthly content outages.
- Built Rust GraphQL mutations for 29,000+ word parts, with input validation and sqlx persistence to PostgreSQL.
- Developed document and chapter management system for 1,100+ edited documents and 5,533 audio files.
- Implemented Cloudflare Turnstile CAPTCHA to authenticate login/signup requests and prevent bot abuse.

Software Engineer

Boston, MA

Sandbox Software Consultancy

Sep. 2024 – May 2025

- Automated 50% of degree drafting workflow by building web scraper and cache for 400+ majors' template plans.
- Optimized degree validation algorithm by 90%, filtering invalid course combinations for range requirements.
- Built minor requirement scraper with REST endpoints, integrating 468 minor requirements into production.
- Established onboarding curriculum and taught workshop for 11 developers on API design and Git workflows.

PROJECTS

LMF-Analytics | *Spring Boot, Java, PostgreSQL*

Jan. 2026

- Designed analytics service for live music venues and bands using Spring Boot to handle 550+ unique users weekly.
- Built E2E test suite for analytics APIs, validating core business logic and CRUD functionality.
- Implemented analytics queries for user events using custom SQL and Spring Boot JPA library.

Clul.us | *React, Flask, Gemini API, Docker*

Oct. 2025

- Built ML-powered extension generating 3Blue1Brown-style animations from screenshots via Gemini and Manim.
- Engineered Flask backend orchestrating LLM analysis, Manim video rendering, and ElevenLabs narration.

T-Error | *C++, Express, MongoDB, React*

Oct. 2024

- Secured 1st place "Best Developer Tool" at HackHarvard 2024 among 513 participants.
- Implemented C++ shell using regex and string similarity to classify terminal errors in real-time.
- Built Express/MongoDB API for error aggregation and documentation, tracking common issues.
